Wood Polymer Composite (WPC) flooring is an innovative, durable option that combines comfort and resilience. Comprising layers of polyvinyl chloride, plasticizers, calcium carbonate, and wood-like materials, WPC features a core protected by a printed vinyl layer showcasing wood or stone imagery and a top wear layer for protection against daily wear and tear. WPC is completely waterproof, making it ideal for moisture-prone areas like bathrooms and kitchens. It offers a comfortable underfoot experience, unlike harder options like stone or SPC planks, and is easy to install with interlocking systems. Additionally, WPC requires minimal maintenance, needing only occasional sweeping and mopping to maintain its appearance.
